

# **International Journal of Surgery and Surgical Sciences (IJSSS)**

Philosophy of IJSSS guides it to map new frontiers in emerging and developing areas in research, industry and governance as well as to link with centers of excellence worldwide to stimulate young minds for creating knowledge based community.

We see the need for synergy and collaboration between these fields rather than segmentation and isolation. Hence, our objectives are to build new links, networks and collaborations between communities of thinkers, scholars, surgery as well as surgical experts and practitioners in order to stimulate and enhance creative and application-oriented solutions for surgery and surgical society.

Our continued success lies in bringing together and establishing channels of communication between leading policy-makers and prominent experts in surgery as well as surgical industry, governance and related business as well as renowned academic, education and research based institutions to provide solutions for addressing the key issues of the contemporary surgery and surgical society.

In order to foster and promote innovative thinking in the surgery as well as surgical sciences, the editor prides itself by introducing its International Research Journal at global platform in ensuring the high quality and professional research standards.

International Journal of Surgery and Surgical Sciences (IJSSS) is a tri-annual, reviewed, interdisciplinary journal. IJSSS focuses on integrating theory, research and practice in the area of surgery and surgical sciences. It aspires to bring academicians, researchers, doctors, surgery as well as surgical industry people and practitioners together.

Global in scope and authorship, International Journal of Surgery and Surgical Sciences (IJSSS) bridges the gap across surgery and surgical communities vis a vis its multiple disciplines with a view of sharing information and to provide a platform for debate with the widest possible audience, doctors, researchers, academicians, surgery as well as surgical experts. The IJMPR has a particular interest in trans-disciplinary and interdisciplinary approaches focusing on the issues relevant in contemporary surgical world. It serves as a forum for review, reflection and discussion informed by the results of recent and ongoing research.

The journal discusses the distinctive disciplinary practices within the sciences of the surgery and surgical field and examines examples of these practices. In order to define and exemplify disciplinarity, the journal fosters dialogue ranging from the broad and speculative to the microcosmic and empirical. In considering the varied interdisciplinary, trans-disciplinary or multidisciplinary work across and between the natural and applied sciences, the journal showcases interdisciplinary practices in action. The focus of papers ranges from the finely grained and empirical, to wide-ranging multi-disciplinary and transdisciplinary practices, to perspectives on knowledge and method.
